WORKING EXPERIENCES

TITANICOM TECH (MALAYSIA) SDN BHD | Jul 2026 — Present

Operation & Maintenance Engineer

- Provide operational support for enterprise server and network infrastructure, resolving tickets and troubleshooting faulty devices in coordination with team members and vendors.
- Work in Linux/Unix server environments, using command-line tools for routine maintenance, system health checks and issue resolution.
- Build and use CentOS 7 and RHEL virtual machines to replicate server environments and validate fixes before applying them to production systems.
- Run hardware diagnostics on production servers, including fieldiag test suites and GPU burn/stress testing, to validate system stability and isolate faulty components before deployment.
- Analyse system, BMC and event logs to identify root cause of hardware and platform faults, including ECC memory error investigation.
- Support onsite project implementation and deployment activities, including installation, cabling, switch configuration and acceptance testing.
- Prepare and maintain operational documentation, including configuration scripts, cable connection tables and project/service acceptance reports.

ENSIGN INFOSECURITY | Sep 2025 — Mar 2026

Security Analyst Intern

- Performed daily system health checks on client devices and monitored application and website availability across a multi-client production environment.
- Monitored and analysed system and security logs for 30 client environments using IBM QRadar, investigating alerts to identify recurring incidents and underlying root causes.
- Connected to Linux servers via PuTTY using CyberArk-vaulted privileged credentials, following controlled access procedures for production system investigation and log retrieval.
- Managed the full incident ticket lifecycle in Palo Alto XSOAR, working to agreed response and escalation criteria.
- Assessed whether incidents required escalation to Level 2 support, documenting findings, root cause assessment and status updates for stakeholders.

PKT(M) LOGISTICS SDN BHD | Sep 2022 — Feb 2024

Software Programmer (Part-time)

- Sole developer and application support owner for the company's employee onboarding, offboarding and joiner-leaver record management system, built on PowerApps, SharePoint and Power Automate.
- Provided ongoing application support: handled service and change requests from internal stakeholders, investigated production issues, and resolved defects without escalation support.
- Monitored automated Power Automate workflow execution, investigated failed runs, and resolved processing errors to maintain continuous operation and reduce downtime.
- Owned end-to-end quality for delivered changes, from requirement validation through functional and regression testing to user acceptance testing prior to release.
- Documented system configuration for handover and maintained application and data security compliance across connected platforms.

FINAL YEAR PROJECT

CloudChain: Integrating Blockchain Systems with MANET Technology

- Integrated Mobile Ad Hoc Network (MANET) with blockchain technology to enhance decentralised communication and data security.
- Developed a custom database extension module in Go backed by MySQL, implementing relational schema design and SQL queries — joins, filtering and aggregation — to persist and retrieve chain and node data, reducing data tampering risks.
- Handled MySQL connectivity, query execution and transaction handling from Go application code.
- Optimised MANET scalability and performance, increasing network efficiency and stability.

SKILLS

Operating Systems: Linux/Unix — CentOS 7 and RHEL (virtual machine builds for server fix testing and validation), shell command line, system and service log analysis, routine maintenance; Windows; macOS.

Production Support: Incident and service request management, log and system alert analysis, root cause investigation, escalation against defined SLA criteria, system health and availability monitoring, deployment support.

Tools & Platforms: IBM QRadar (SIEM), Palo Alto XSOAR (SOAR), CyberArk (privileged credential vaulting), PuTTY/SSH, PRTG Network Monitoring, fielddiag and GPU stress/burn diagnostics.

Scripting & Development: Go (blockchain module development, SQL database integration); shell command line and configuration scripting; PowerApps, Power Automate, SharePoint, Visual Studio.

Databases: MySQL — relational schema design, joins, filtering, aggregation and transaction handling; MongoDB.

Documentation: Incident and status reporting, configuration scripts, operational and acceptance reports; advanced Microsoft Excel and Word.

Languages: English, Mandarin, Malay.

EDUCATION

University of Plymouth | Sep 2023 — Dec 2025

- BSc (Hons) Computer Science (Cyber Security) — Upper Second Class.

Peninsula College Malaysia | Jan 2021 — Apr 2023

- Diploma in Computer Science — First Class, CGPA 3.53.

CERTIFICATION

- CompTIA Security+ CE | Feb 2025 — Feb 2028
